The Mobile Warehouse

STAGING & SHIPPING

EasyStockLight® makes the shipment/forwarding area as a separate warehouse. Movements are rationalised according to the preparation of the limelight and the actual load of transport means. Moreover, thanks to the monitoring of all the shipment/ forward activity, it is possible to check how many pallets are still at stake in the several destinations. It is also possible to list all the movements of input and output.

Functionality of **EasyStockLight®**

Data acquisition

EasyStockLight® acquires the master data on products, suppliers and customers from the customer's ERP system

Goods Receipt

Easy StockLight® acquires the acceptance documents from vendor materials or production and produces any article labels (if necessary)

Proposed location

Easy StockLight® generates proposals location where to place the goods according to the map indicating them on the terminal radio frequency

© 2015 MadLab Srl. All rights reserved. MadLab, logo MadLab, MadStore ™, EasyStock®, 4E®, EasyStockForEyes® are trademarks of MadLab Srl. All other products and company names mentioned herein are trademarks or represented their respective owners. MadLab Helpline Media: marketing@madlab.biz

Picking

Easy StockLight® acquires the shipping documents (eg sales orders), generates picking list and sends it to the operator terminal equipped with radio frequency, indicating for each item where it is located and the quantities of goods to be taken

Shipping

Easy StockLight® returns to the ERP system all picking tasks conducted for the generation of transport documents

Stocks

Easy StockLight®, thanks to the use of radio frequency terminal equipped with a barcode reader, ensures the real-time update of the inventory with respect to the location where it is stowed the goods
