Other customers

#4E
our R&D department

Special projects #ES4E

- Code name: EasyStockForEyes®(#ES4E) - Revolutionary solution for the automated management of the picking in the warehouse. The MadLab's staff has developed a special version of its WMS to manage the logistics operations of the warehouse through smart glasses, (Google Glass and Epson Moverio)
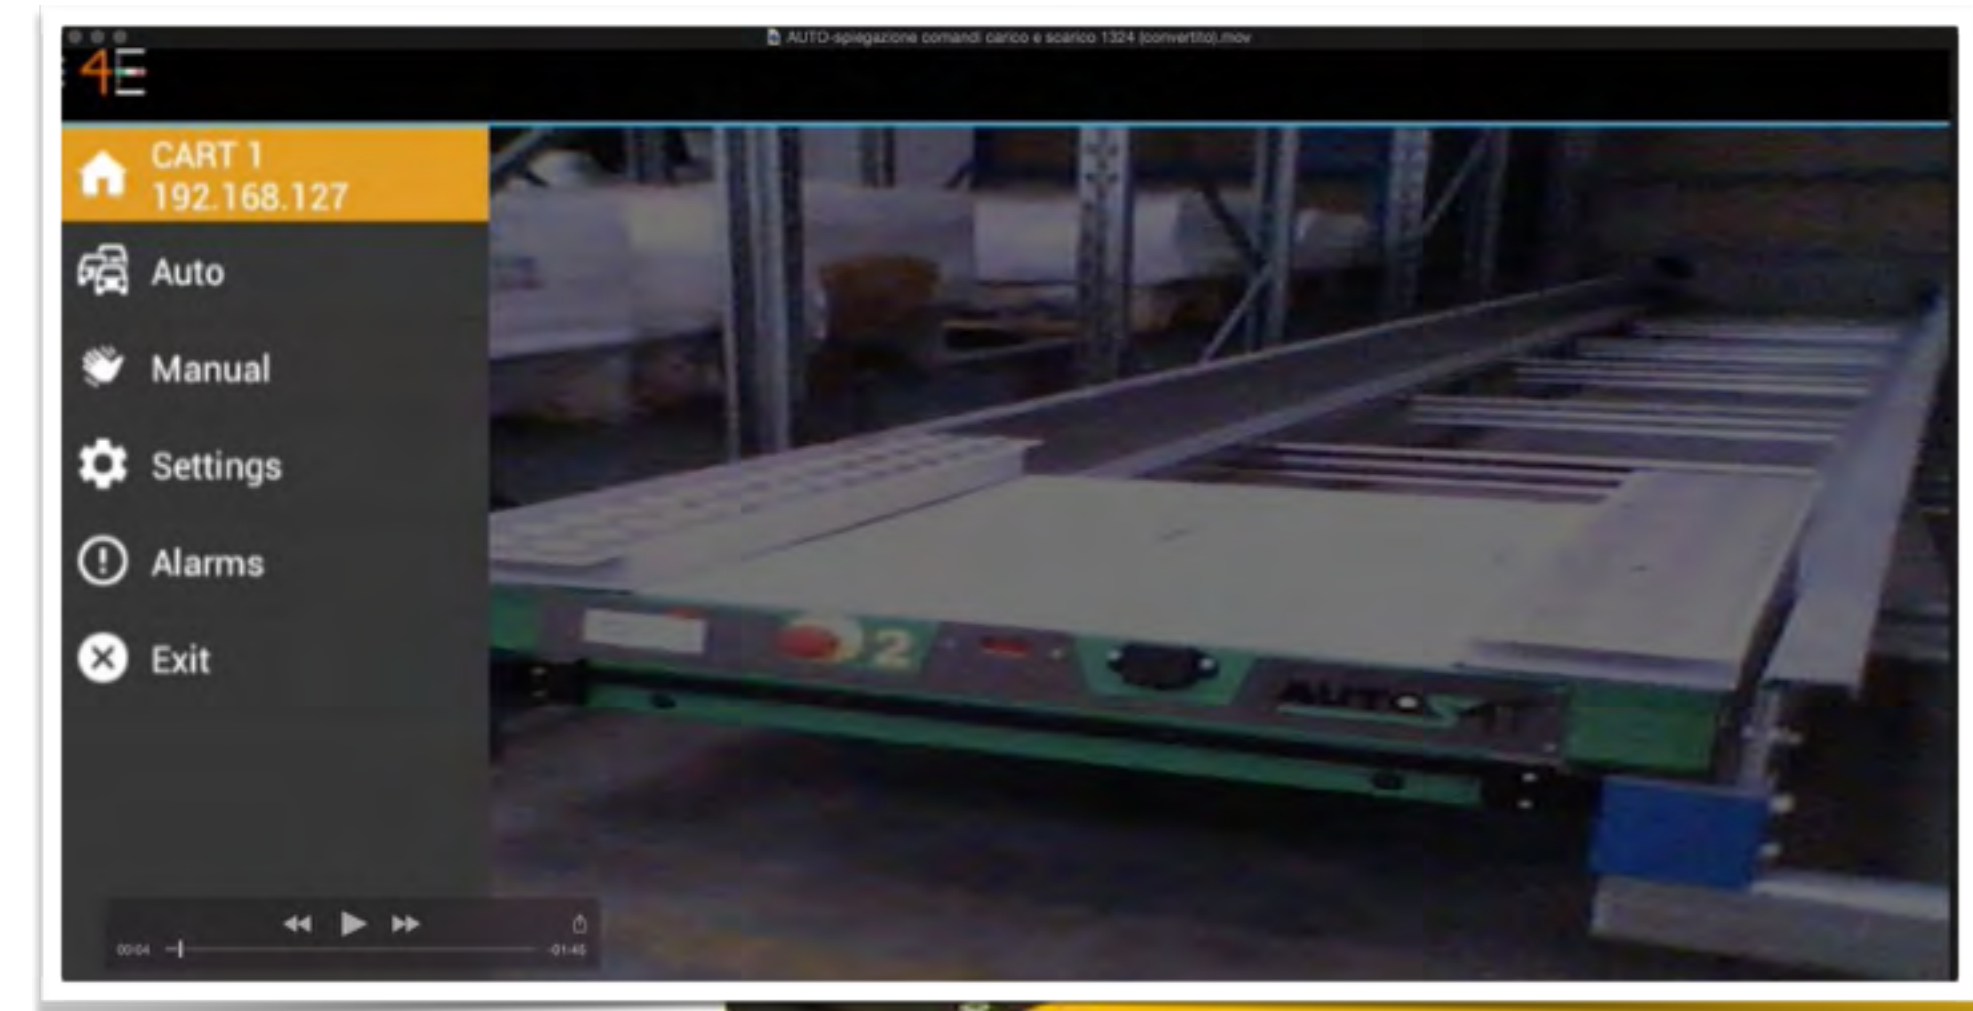

Special projects #4E4AW

- Code name: ForEyesForAutomatic Warehouses®(#4E4AW) - The #4E system, interfaced with the software of Automatic Warehouses, or even better if interfaced to MadLab's WMS EasyStock®, allows you to enjoy the picking list so agile and quick, guiding the operator step by step in the picking tasks and products identification. Locate the correct compartment in which to get or put items will be as simple as playing Tetris!
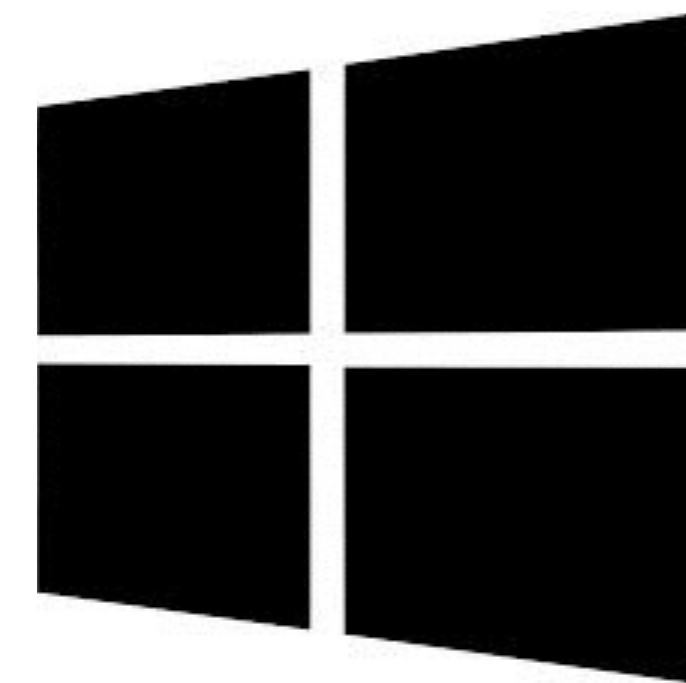

Special projects #4E4SAT

- Code name: ForEyesForSat (#4E4SAT) - natural evolution of our WiFi remote control for hand held terminals, ForEyesForSat allows you to control up to 256 shuttle simultaneously, freeing the hands of the forklift driver, allowing him to drive the forklift in maximum security, all with a unique wearable device: the smart glasses Epson Moverio
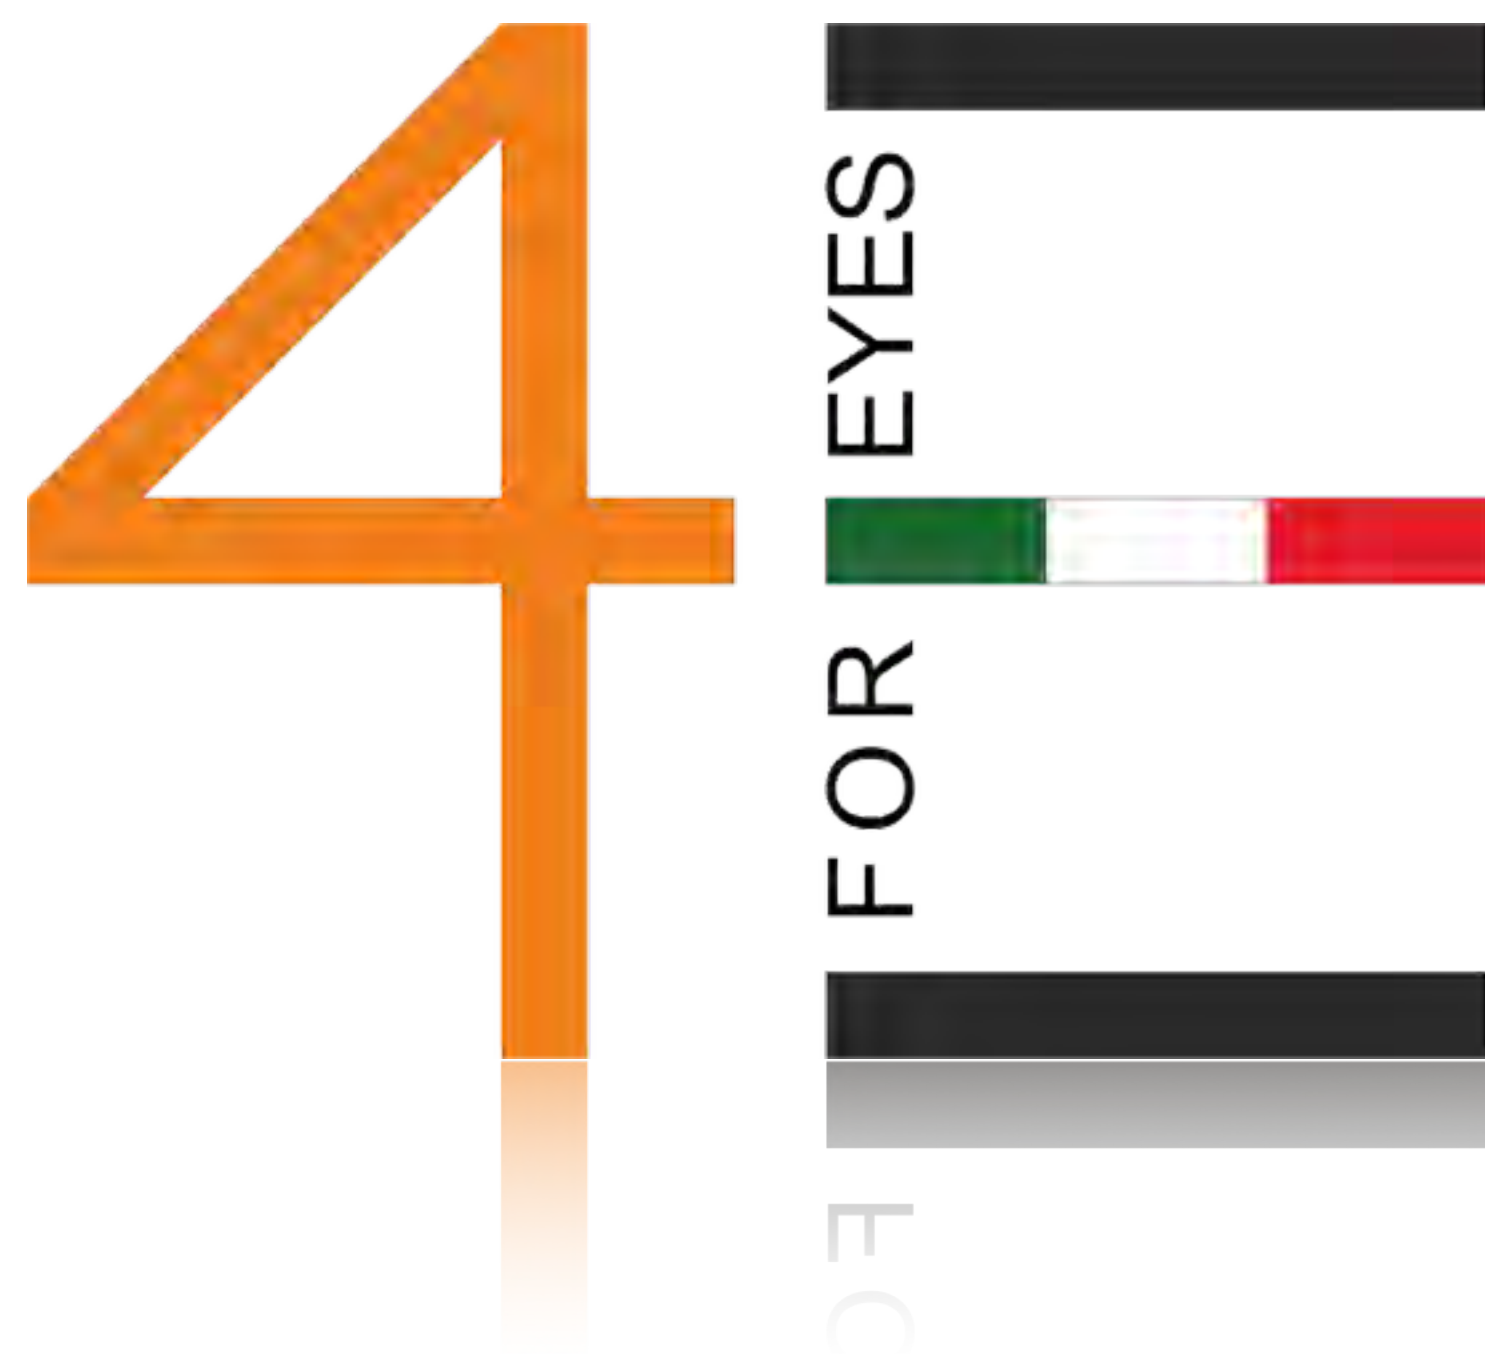

Axiom

MadLab not produce consumer app…

Axiom

… but industrial tailored software!

Thanks for your attention!
